SUMMARY

Flutter & Frontend Developer shipping production mobile and web applications end-to-end — from database schema to deployed UI. Built and deployed [N] client and personal projects (Next.js, TypeScript, Flutter) integrating Firebase, Supabase, Neon Postgres, and payment infrastructure like Paystack, while resolving real production issues: Tailwind version migrations, CI/CD build failures, cross-platform config conflicts. Currently contributing to a frontend team building a live student voting platform, while completing a B.Sc. in Software Engineering.

EDUCATION

B.Sc. Software Engineering

2024 - 2028

Dominion University, Ibadan — In View

TECHNICAL SKILLS

Mobile: Flutter, Dart, Kotlin, Jetpack Compose

Web: TypeScript, React, Next.js, Tailwind CSS, HTML, CSS, JavaScript

Backend & APIs: Firebase, Supabase, Neon Postgres, REST APIs, Sanity CMS

Tools & Deployment: Git, GitHub, VS Code, Android Studio, Vercel, Netlify

EXPERIENCE

Frontend Developer — NACOS DU Software Development Team

July 2025 – Present

- Shipped 15+ production UI components (e.g., sign-in flow, vote progress tracking) for a student election voting platform used by over 200 students, as measured by [zero critical bugs post-launch / massive reduction in reported UI issues], by rebuilding the sign-in flow to match Figma specs and implementing OTP-based authentication.
- Reduced onboarding friction for new team members, as measured by [PR review turnaround / fewer merge conflicts], by following a consistent Git branching workflow across a team of 12 developers.
- Maintained 80% design fidelity to Figma specs across 10 shipped pages/components, as measured by design review sign-off, by implementing pixel-exact layouts including gradient borders and custom marquee animations.

Freelance Flutter & Frontend Developer — Independent Client Work
July 2025 – Present · Part-time, project-based

- Delivered 5+ client websites (Next.js, TypeScript, Tailwind CSS) from initial design brief to production deployment on Vercel, as measured by 4+ live sites with zero post-launch critical bugs, by building fully responsive layouts and reusable component libraries per project.
- Built a cross-platform accounting application (Flutter) currently in development, targeting 20+ core features (transaction logging, expense categorization, financial reporting) backed by a Neon Postgres database, by designing the schema and implementing structured data flows from scratch.
- Resolved multiple critical build failures (dependency version mismatches, OS-specific path errors, React runtime errors) across production deployments, as measured by successful CI/CD pipeline completion, by debugging Vercel build logs and Tailwind v3→v4 migration conflicts.

PROJECTS

BizLedger — Cross-platform accounting app (*In Progress*) — Flutter · Neon Postgres

Designed the database schema and built structured data flows for a multi-user accounting app, targeting 20+ core financial-tracking features, to replace ad-hoc spreadsheet tracking for small business income/expense records.

Business Website — Operations Manager & Education Specialist — Next.js · TypeScript · Tailwind CSS

Shipped a fully responsive marketing site with reusable section components, achieving a Lighthouse performance score of 100 and deployed to production on Vercel with little to no post-launch bugs.

Architect Personal Brand Website — Next.js · TypeScript · Tailwind CSS

Built a fully responsive personal-brand site with an editorial serif design system (Tailwind v4), migrating mid-build from Tailwind v3 and resolving 4+ config conflicts to ship on schedule.

Fashion E-Commerce Platform (*In Progress*) — Next.js · TypeScript · Sanity CMS · Paystack

Building a CMS-driven storefront with an admin dashboard for inventory management and Paystack-integrated checkout, targeting [N] product categories and real-time stock tracking.

Personal Developer Portfolio — Next.js · TypeScript · Tailwind CSS

Built and deployed an SEO-optimized portfolio with Open Graph metadata, achieving a Lighthouse SEO score of 100 and reusable component architecture across [N] pages.

Student Budget Tracker — Flutter · Firebase

Built a budgeting app with Firebase-backed expense categorization, used by a reasonable number of students to track spending across 10+ categories.
