SUMMARY

Software Engineering student and developer building production-oriented mobile and full-stack applications across Flutter, React, and Next.js. Experienced in taking products from architecture and database design through implementation, API integration, authentication, responsive UI, testing, and deployment. Built personal and client applications using Flutter, TypeScript, PostgreSQL, Neon, Prisma, Firebase, Supabase, and Vercel, with hands-on experience debugging build failures, designing relational data models, and collaborating across multidisciplinary teams.

TECHNICAL SKILLS

Languages: Dart, TypeScript, JavaScript, Kotlin, SQL, HTML, CSS

Mobile: Flutter, Riverpod, Drift, SQLite, Jetpack Compose, Android

Frontend: React, Next.js, Tailwind CSS, Responsive UI, Component Architecture

Backend & Data: Node.js, REST APIs, PostgreSQL, Neon, Prisma, Firebase, Supabase, Sanity

Authentication & Services: Better Auth, Firebase Authentication, Paystack integrations

Architecture: Clean Architecture, Feature-First Architecture, State Management, Relational Database Design

Tools & Deployment: Git, GitHub, GitLab, Vercel, Netlify, VS Code, Android Studio, Figma

Engineering: API Integration, Database Migrations, Debugging, CI/CD, Responsive Design, UI Engineering

EXPERIENCE

Frontend Developer — NACOS DU Software Development Team / July 2025 – Present

- Shipped 15+ production UI components for a student election platform used by 200+ students, implementing authentication, vote-progress interfaces, and responsive application flows from Figma specifications.
- Maintained consistent development workflows across a 12-developer team through structured Git branching, collaborative development, and code-review practices.
- Delivered 10+ pages and components with close adherence to UI specifications, implementing responsive layouts, gradient treatments, animations, and reusable interface patterns.
- Collaborated with designers and developers to translate product requirements into production-ready React interfaces while resolving UI, responsiveness, and integration issues.

Freelance Software Developer — Independent Client Projects / July 2025 – Present · Part-time / Project-based

- Delivered 5+ client websites and software projects using Next.js, TypeScript, React, and Tailwind CSS, taking projects from requirements and UI implementation through production deployment.
- Built BizLedger, a cross-platform Flutter business ledger and inventory application, implementing product management, sales recording, stock adjustments, debt tracking, reporting, backup/restore, and relational data flows using Drift/SQLite and PostgreSQL.
- Developed the Acire Ventures Sales System, a full-stack business sales and inventory platform using Next.js, TypeScript, Prisma, PostgreSQL/Neon, authentication, and role-aware application workflows.
- Resolved recurring production and build issues by diagnosing dependency conflicts, framework migrations, runtime errors, deployment failures, and configuration problems across local and cloud environments.

Product / Technical Lead — Gbanner Systems / 2026

- Coordinated development activities across multiple departments, establishing project direction, reviewing team progress, and aligning contributors around implementation priorities and delivery deadlines.
- Organized cross-functional team meetings to collect progress updates, identify blockers, and provide actionable feedback to improve delivery across design and development workstreams.
- Reviewed project progress with the industry-based supervisor and communicated consolidated team feedback, proposed deadlines, and implementation priorities to improve execution.

SELECTED PROJECTS

BizLedger — Business Sales, Inventory & Accounting Platform — / Flutter · Dart · Riverpod · Drift · SQLite · PostgreSQL · Neon

- Designed and implemented a business management application covering 20+ core workflows, including product management, sales recording, inventory tracking, debt management, reporting, and business profiles.
- Implemented versioned local database architecture with schema migrations, relational data models, backup/restore, and transactional workflows using Drift and SQLite.
- Built product lifecycle functionality including archiving/restoration, stock adjustments, product details, below-cost sale warnings, and direct cart quantity editing.
- Structured the application using Feature-First + Clean Architecture, Riverpod state management, GoRouter navigation, and reusable service layers.

Acire Ventures Sales System — / Next.js · React · TypeScript · Prisma · PostgreSQL · Neon · Better Auth · Vercel

- Architected a full-stack sales and inventory platform covering products, sales, invoices, reservations, business accounts, sales representatives, administration, and audit history.
- Designed a relational PostgreSQL schema with Prisma to preserve transaction history while supporting role-specific application workflows and business rules.

- Implemented database integration against Neon PostgreSQL and backend health checks, establishing the foundation for production deployment and application monitoring.
- Designed safeguards for critical workflows including below-cost confirmation, completed-sale correction rules, product archiving, reservation expiry, and duplicate-name prevention.

GABI — Generative Brand Identity & Creative Direction Platform — / *Next.js · TypeScript · AI · Figma · Full-Stack Web*

- Contributed to the architecture and product direction of an AI-powered brand platform designed to transform business concepts into structured brand identities and creative assets.
- Developed product requirements around brand strategy, logo systems, typography, color systems, AI-generated mockups, social content, and downloadable brand documentation.
- Refined the platform around context-aware AI generation, responsive product architecture, animated interfaces, and industry-specific creative direction.

Personal Developer Portfolio — / *Next.js · TypeScript · Tailwind CSS · Vercel*

- Built and deployed an SEO-focused developer portfolio spanning 6+ reusable sections/pages, showcasing software engineering, mobile development, and web projects.
- Implemented structured metadata and Open Graph configuration, achieving a 100 Lighthouse SEO score on the previous implementation.
- Developed reusable components and responsive layouts while iterating on animation, typography, navigation, and interaction design.

EDUCATION

B.Sc. Software Engineering — Dominion University, Ibadan | 2024 – 2028 | In View

ADDITIONAL

Open to: Junior Software Engineering, Mobile Development, and Full-Stack opportunities.
